Fluoride

If there's **any** doubt,
get it **out**!

Vijay Sarma - 2010 Mayor of Toronto Hopeful

1512-C Dundas Street West, Toronto, Ontario, M6K 1T5

Vijay.Sarma@gmail.com | 647-857-5755 | <http://WhatYouWantToBelieveIn.com>

The debates about the use of fluoride in our drinking water were settled a long time ago, including in Montreal, Vancouver and most of Europe where they realize it's a mistake and don't use it.

People in Toronto can simply share the information below with their neighbours to help finally get it out of our water and save us \$450 million tax-dollars a year.

Many courageous doctors, scientists, journalists, activists and others have been saying it's not good for us for years with great reasons, including people like University of Toronto Head of Dentistry Dr. Hardy Limeback, who originally recommended that our City use it, then later recanted in a very long and well-referenced article over 10 years ago.

Once we're all judging the exact same thing, or the exact same 30 minute movie like "The Fluoride Deception", then we can see if we agree with it. We probably will. The only reason this information keeps getting passed on for decades is because good people persist in trying to warn us about it, so please check it out and invite everyone in your ward to as well.

After that, we can simply see if our elected officials share the same opinion as us, but not on the general topic of "fluoride" or anything else, but about exactly what we all see, like the same DVD or copy online, so we're all judging the same thing. If their opinions differ, then maybe they shouldn't be representing us. If not, then let's get rid of the fluoride..

Finally, many smaller municipalities have managed to keep it out because they're closely connected with their City officials, including Thunder Bay, where the Mayor, City Councillors and the public fought the federal government and won a 6 - 5 vote to avoid using it. We can do the same thing here in Toronto if we're willing to for our health and happiness.

Thunder Bay Council says no to fluoride

By Jamie Smith, tbnewswatch, July 21, 1009

City council rode a wave of perceived public opinion early Tuesday morning, voting against a resolution to study the fluoridation of Thunder Bays water. ...

... While Giertuga said calls and emails from the public were three to one against fluoridation, Mayor Lynn Peterson said she believed it was more like 10 to one. Peterson voted against the resolution due to environmental concerns and personal choice.

Green Party of Canada website August 22, 2010

Green Party of Canada calls for ban on the fluoridation chemicals hexafluorosilicic acid and sodium silicofluoride.

At its Convention in Toronto, August 20-22, 2010, the Green Party of Canada passed the following resolution -see [printer-friendly version](#). Also [available in French](#). Note: In the U.S. over 90% of fluoridation of drinking water schemes use hexafluorosilicic acid and sodium silicofluoride.

Considerations:

This motion, in calling for a ban on the fluoridation of public drinking water, would create a new policy and would involve the federal government stepping into an area that has traditionally been within the jurisdiction of the provinces.

The Fluoride Debate - CBC Video

To fluoridate or not to fluoridate? That's the question at the centre of one of the longest debates in Canadian history. Advocates of water fluoridation say it's a safe and effective way to reduce cavities. Opponents like the outspoken broadcaster Gordon Sinclair called it rat poison and a despicable communist plot. Water fluoridation: Great public service or a gross infringement of individual rights? The debate rages on.

How much is too much?

Broadcast Date: June 3, 1999

While water fluoridation is approved and endorsed by the Canadian Dental Association, new research is shedding light on the growing concern of over-fluoridation. Fluoride is still considered safe in water supplies at one part per million but many of us may receive beyond that amount. Fluoride can be increasingly found in everyday consumer products such as baby formulas, mouthwash, toothpaste and processed foods.

The Fluoride Deception (Interview With Christopher Bryson)

28:31 - 4 years ago

In this video, Christopher Bryson, an award-winning journalist and former producer at the BBC, discusses the findings of his new book The Fluoride Deception. **EARLY REVIEWS** of The Fluoride Deception: "Bryson marshals an impressive amount of research to demonstrate

fluoride's harmfulness, the ties between leading fluoride researchers and the corporations who funded and benefited from their research, and what he says is the duplicity with which fluoridation was sold to the people. The result is a compelling challenge to the reigning dental orthodoxy, which should provoke renewed scientific scrutiny and public debate." -- PUBLISHERS WEEKLY

April, 2000

To whom it may concern: Why I am now officially opposed to adding fluoride to drinking water

Since April of 1999, I have publicly decried the addition of fluoride, especially hydrofluosilicic acid, to drinking water for the purpose of preventing tooth decay. The following summarize my reasons.

<http://www.fluoridealert.org/limeback.htm>

Note: I even made a song about it, plus I did several CKLN radio shows helping to warn us.
